

Current Feature

Dashboard UI — Phase 1 (layout shell)

Status

In Progress

Goals

- Initialize ShadCN UI and install the components needed for the shell
- Dashboard route at `/dashboard`
- Main dashboard layout plus any global styles it needs
- Dark mode by default
- Top bar with search and a "New Item" button (display only, no behaviour)
- Placeholder sidebar and main area — just an `h2` reading "Sidebar" and "Main" for now

Notes

- Phase 1 of 3. Full spec: `@context/features/dashboard-phase-1-spec.md`
- Layout reference: `@context/screenshots/dashboard-ui-main.png`
- Mock data to render against once phases 2/3 land: `@src/lib/mock-data.ts`
- Scope is the shell only — no item cards, collection cards or sidebar contents yet.

History

- Project setup and boilerplate cleanup
- Initial Next.js 16 + Tailwind CSS v4 setup (App Router, TypeScript strict); committed and pushed to GitHub
